Event rental agreement (MS Forms → PDF)

TEAM TASKS

Edwin

BLOCKED**Get access to DocuSign**

The full member onboarding workflow is built and deployed. Edwin needs a DocuSign account connected to Claude to run `/send-member-agreement`. Once connected, the entire intake-to-agreement flow is automated.

MEMBER ONBOARDING FLOW (WAITING ON DOCUSIGN)

- 1 Edwin runs `/send-member-agreement` — Claude reads the BossHub inquiry form and shows matching submissions
↓
- 2 Edwin confirms member details and pricing add-ons (mail service, any extra fees). All membership pricing is auto-calculated from the form.
↓
- 3 Claude sends the **spARK new member template** via DocuSign. The Founder (member) signs first — Becca's signature is pre-configured as the second signer and triggers automatically.
↓
- 4 After the signed agreement is returned, Edwin runs `/activate-member-access` — Verkada building access, Nexodus member portal, and a welcome email draft are created in one pass.

Action needed: Jarred adds the DocuSign connector in Claude. Once connected, both onboarding skills are fully operational with no other setup required.

**Becca**

CEO

LIVE**CEO Tools — Excel & Outlook in Claude**

Becca can add the CEO Tools connector in Claude (`sp-ark-ceo-tools.jarred-823.workers.dev/mcp`), sign in with her sp-ARK Microsoft account, and immediately access Excel/SharePoint and Outlook from any Claude conversation.

Available tools after connecting:

- Search SharePoint / OneDrive for Excel files
- Read rows, append rows, update cells in any workbook
- List, search, and read Outlook emails
- Create drafts and send email directly from Claude

IN REVIEW**Recalibrate air supply**

Review and adjust the air supply system at sp-ARK Labs and create a member-facing form for office condition feedback. Waiting on Tridium.

**Cassandra**

Community Manager

READY TO USE**Intern form matcher on BossHub**

The `/match-interns` skill is built and ready. It pulls intern applications and member intern requests from BossHub and produces a ranked match report — skills overlap, industry alignment, and availability — with an option to draft introduction emails for confirmed matches.

How to run:

- Type `/match-interns` in Claude
- Review the ranked match report
- Confirm matches to auto-draft intro emails

**Caitlin**

Marketing

IN REVIEW**Revisit Canva automation**

Review the current state of Canva MCP integration and determine what's feasible. The Canva Connect API supports text and image autofill in templates but does not support changing shape fill colors. The goal is to identify which design workflows can be reliably automated from Claude and which require manual steps in Canva.
